Bracken Control Case Studies

Rolling

This is a summary of the information that has been kindly provided by people with current experience of controlling bracken using hand pulling and whipping in different parts of the UK. It provides some real-world experience to supplement the preliminary guidance about each control method.

The detail is limited by the amount of information available. More case study information is welcomed to allow us to add to the guidance. Please email details to: **Bracken@naturalengland.org.uk**

Comments

- Standard agricultural rollers can be used to crush bracken in fields.
 - They come in different sizes for towing behind a tractor or ATV and can be single (as shown) or multi-gang.
 - No specific case study information has been provided in time to include in this summary, therefore, information from anyone with experience of using this equipment is welcomed and can be sent to: Bracken@naturalengland.org.uk
-
